

Your website was not designed. It was accumulated.

Every campaign leaves something behind: a tweaked hero, a new blue, one more button style. None of it wrong on its own, until every new page needs a designer and marketing ships at the speed of the review queue. A design dictionary closes every decision once, as working code you own, so your team publishes without asking anyone.

ACCUMULATED

[Get started](#)[Get Started](#)[GET STARTED](#)[Get started](#)[GET STARTED](#)

Five versions of the same button, one real website. Every one needs a decision, a review, and someone to maintain it.

DECIDED ONCE

[Get started](#)[Learn more](#)

Nobody has to have an opinion about the button ever again.

One radius, one weight, one named color, both variants in the system.

FOUR LAYERS, EACH DECIDED ONCE

FOUNDATION

Tokens

Color, type, spacing, radius as structured data. A rebrand is one file.

LAYER 2

Components

Buttons, cards, forms assembled from tokens, so they cannot drift.

LAYER 3

Templates

Page sections. Build a layout once, use it fifty times.

LAYER 4

Pages

Composed by your team in the CMS. No developer, no deploy.

Change a token and every layer above updates. That is a design system versus a style guide: one is enforced by code, the other is a document people are asked to remember.

THE PROOF: THESE ARE THE LIVE TOKENS

 primary #3265fd  foreground #0a0a0a  muted #e5e7eb  border #dadee4 radius 0 type Inter

This PDF is rendered from the same values that render ohmni.tech. Same blue, same sharp corners, same typeface, pulled from the token files in the repository. That is the system working: one set of decisions, every surface obeys.

WHAT YOU GET, IN YOUR REPOSITORY FROM DAY ONE

TOKENS

Every decision as data. A rebrand becomes a change in one file.

COMPONENTS

Interface pieces that are coherent by default.

TEMPLATES

Sections your team composes without a developer.

GUARDRAILS

Accessibility, performance and search structure built in.

This is also what makes AI safe to point at your website. A blank canvas gives you design creep at machine speed. A design dictionary gives AI nowhere to drift: the colors it can reach are the only colors that exist.

See the system live

Every token and every section on this page is rendered from the real system at ohmni.tech/design. Onboarding a new hire or an agency takes an afternoon.
